BACKGROUND
PaCES was conceived to address the problem of late referrals to palliative care (PC) for advanced cancer patients in Alberta, Canada.

OBJECTIVES
• Use process improvement strategies to identify why complex care becomes fragmented.
• Engage stakeholders in the proposal of solutions to gaps and barriers identified.

METHODS
• Process mapping, affinity analysis, and fishbone analysis were used to understand the current state, identify gaps and barriers, and identify root causes.
• Stakeholders and front line workers (n=65, from 17 stakeholder groups) brainstormed solutions to the root causes.

DISCUSSION/CONCLUSIONS
• Process improvement strategies assisted in identifying why complex care becomes fragmented.
• The results are informing future state development and targets for improvement.
• By bringing individual teams together we created an opportunity for collaboration, increased stakeholder awareness and devised collaborative solutions.

WHERE ARE WE NOW
• Provincial Clinical Practice Guideline and accompanying pathway developed.
• The results are informing future state development and targets for improvement.
• By bringing individual teams together we created an opportunity for collaboration, increased stakeholder awareness and devised collaborative solutions.

136 Actionable Solutions

37 pages of proposed solutions or 700 individual comments

• 27 root causes to the 7 problem statements were identified
• Solutions were proposed by 65 individuals from 17 stakeholder groups through in-person meetings and online survey
• Raw solutions were sorted with change management experts
• 136 actionable solutions were identified
